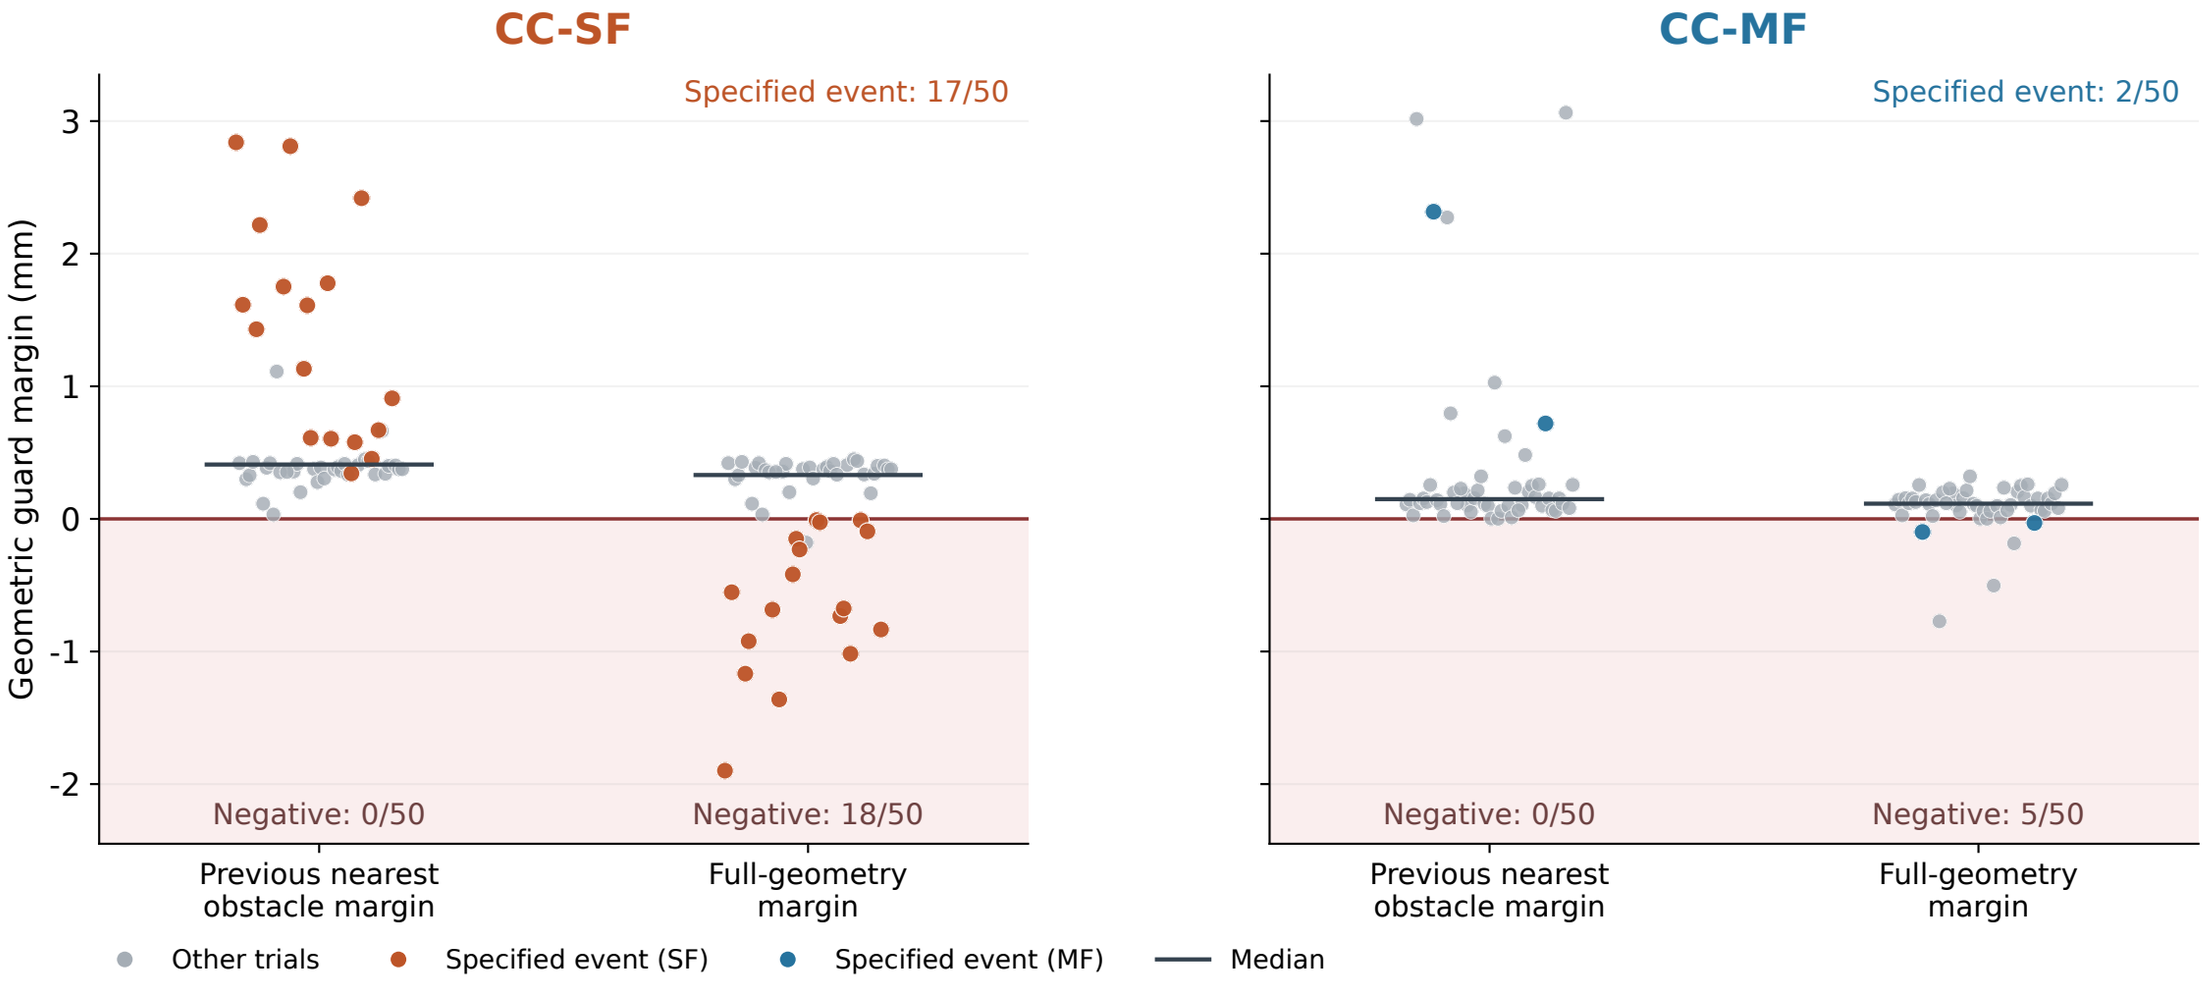
Constraint margins over all trials: previous obstacle versus full geometry

DoN 0.85 · 50 trials per method · one step per trial: the smallest recorded full-geometry margin



Margin = signed clearance - 0.05 mm. Nonnegative means guard satisfied; negative means guard violated. One dot represents one trial.

Both columns evaluate the same actual next pose. Colored trials improve the previous obstacle clearance while crossing another obstacle guard.

All trials are included; traversal lengths differ. These are geometric guard margins, not native optimized chance residuals.
