Smooth finite-step change can exceed a switching residual's endpoint change
(a) Entire recorded 0.1 s pose interval
(b) Same segment, close to the feature switch
SF residual
MF residual
Probability-scale residual b (pp)
Endpoint change |delta b|
SF: 1.232 pp
MF: 2.033 pp
Pose interpolation fraction alpha (0 to 1)
At delta alpha = +/- 0.0001
SF: 0.5157 pp
MF: 0.0012 pp
Local y-axis range differs from panel (a).
Offset from switch, delta alpha (x 0.001)
DoN 0.85 | CC-MF source, seed 35, 9.9 to 10.0 s | Identical poses and fixed reconstructed covariance
CPU float64 offline model evaluation; interpolated poses are not additional recorded states.
